**LOGIN PAGE :** THE LOGIN CLASS REPRESENTS A GRAPHICAL USER INTERFACE (GUI) FOR A LOGIN SCREEN IN A JAVA SWING APPLICATION. IT ALLOWS USERS TO ENTER THEIR EMAIL AND PASSWORD, THEN CLICK A "LOGIN" BUTTON TO ATTEMPT LOGIN. IF THE CREDENTIALS MATCH A PREDEFINED SET (IN THIS CASE, "AYAREDA@GMAIL.COM" AND "12345678"), IT OPENS THE MAIN APPLICATION WINDOW. OTHERWISE, IT DISPLAYS AN ERROR MESSAGE. ADDITIONALLY, THERE'S A "SIGN UP" BUTTON THAT OPENS A SIGNUP WINDOW FOR NEW USERS. THE CLASS UTILIZES EVENT HANDLING TO RESPOND TO USER ACTIONS SUCH AS BUTTON CLICKS.

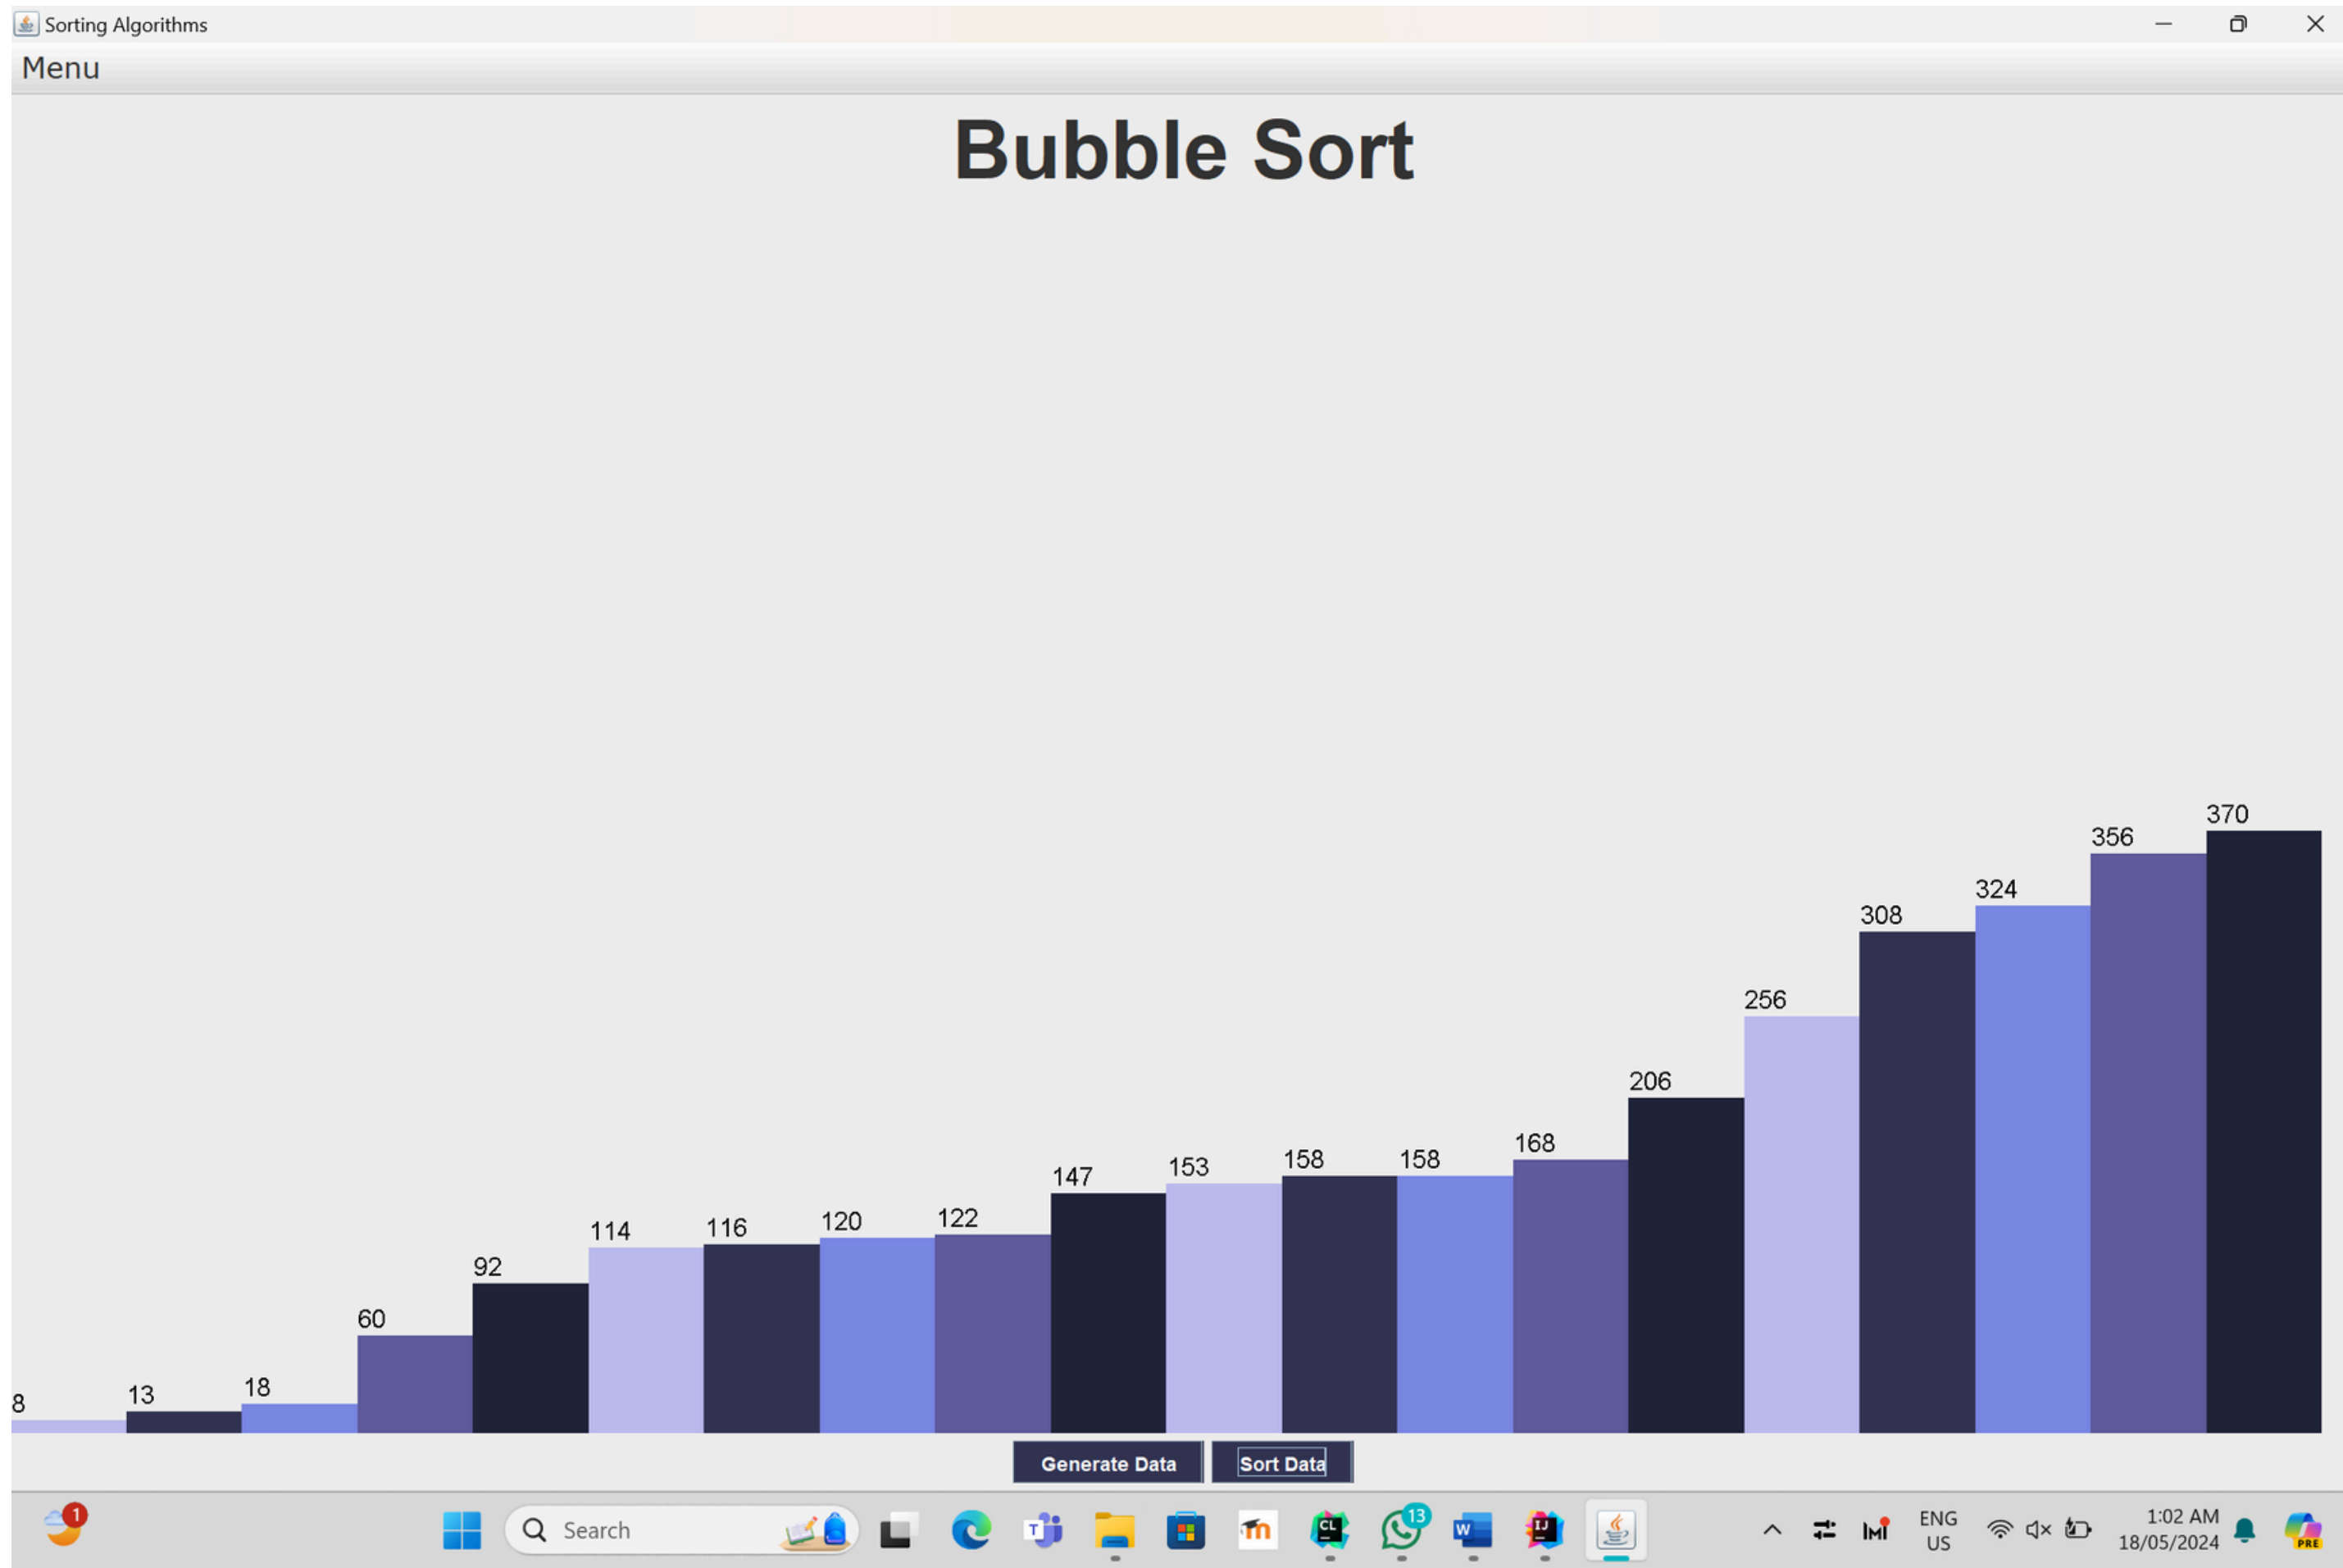

**HOME PAGE:** This main page has a drop-down list at the word “Menu” from which we can choose the type of sort or search that we need to make.

**BUBBLE SORT:** Random values can be changed by clicking on the generate data button, and when clicking on the sort data button, the elements are arranged in a visualization manner

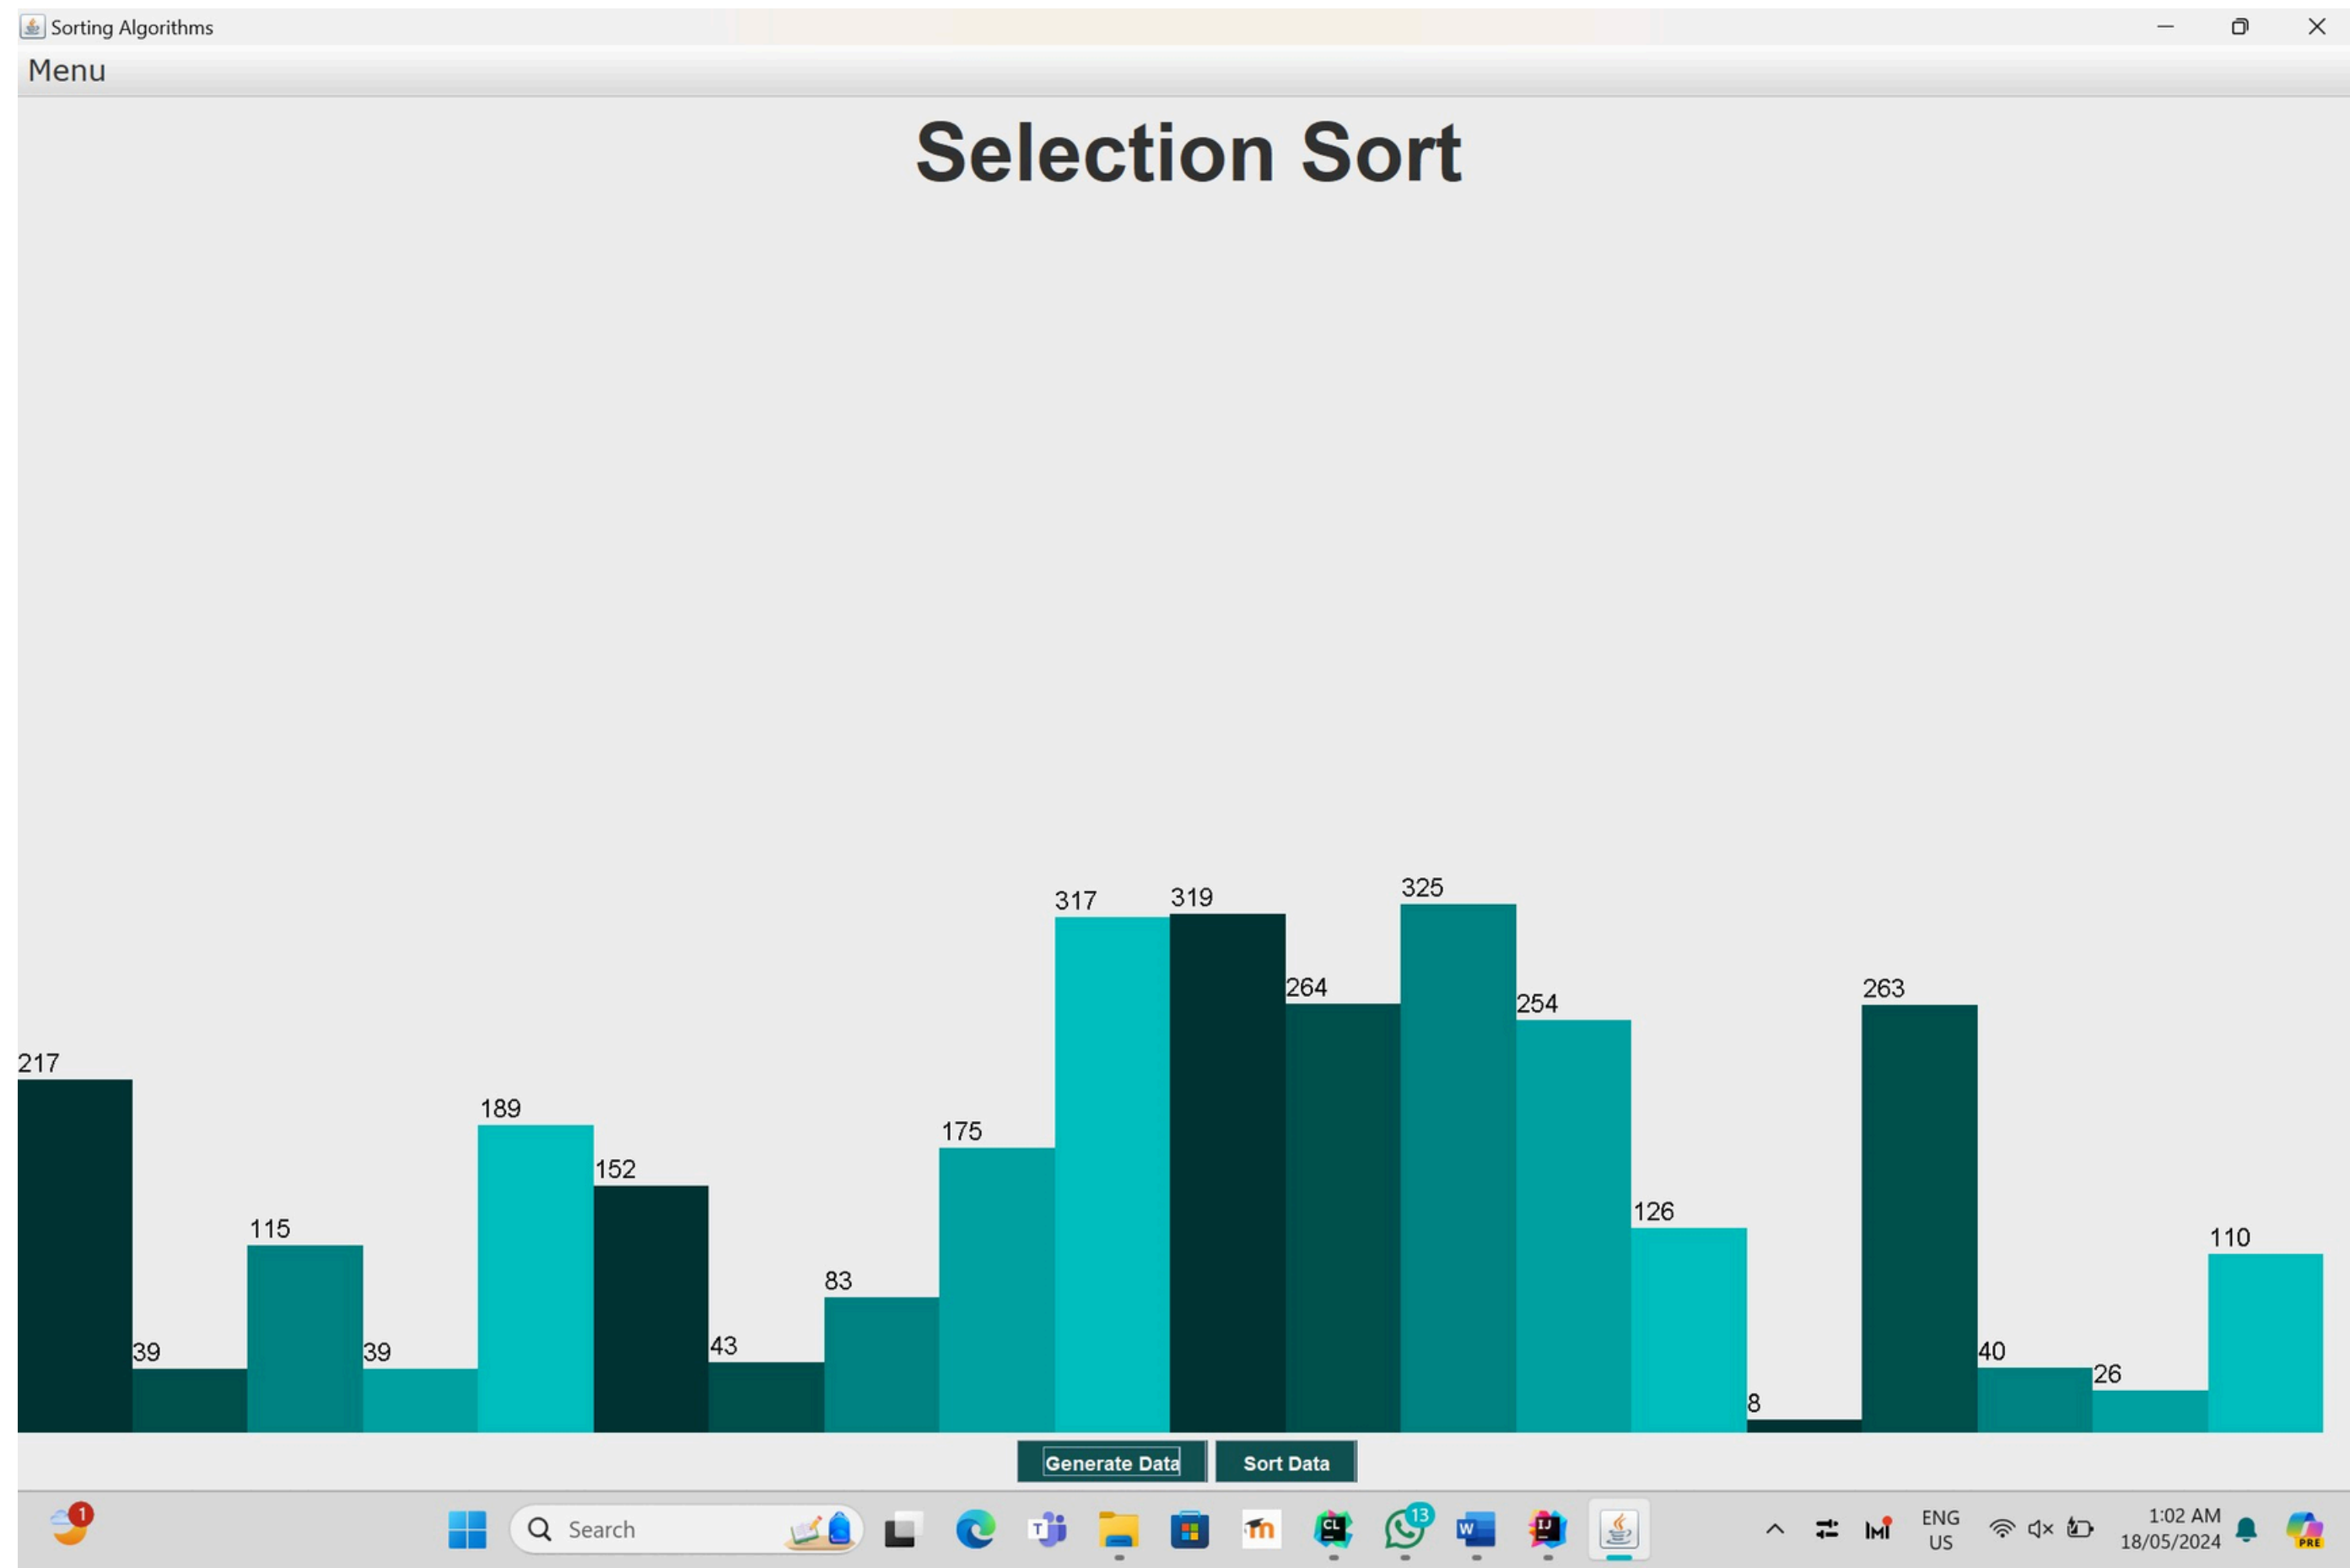

# Items after sorting

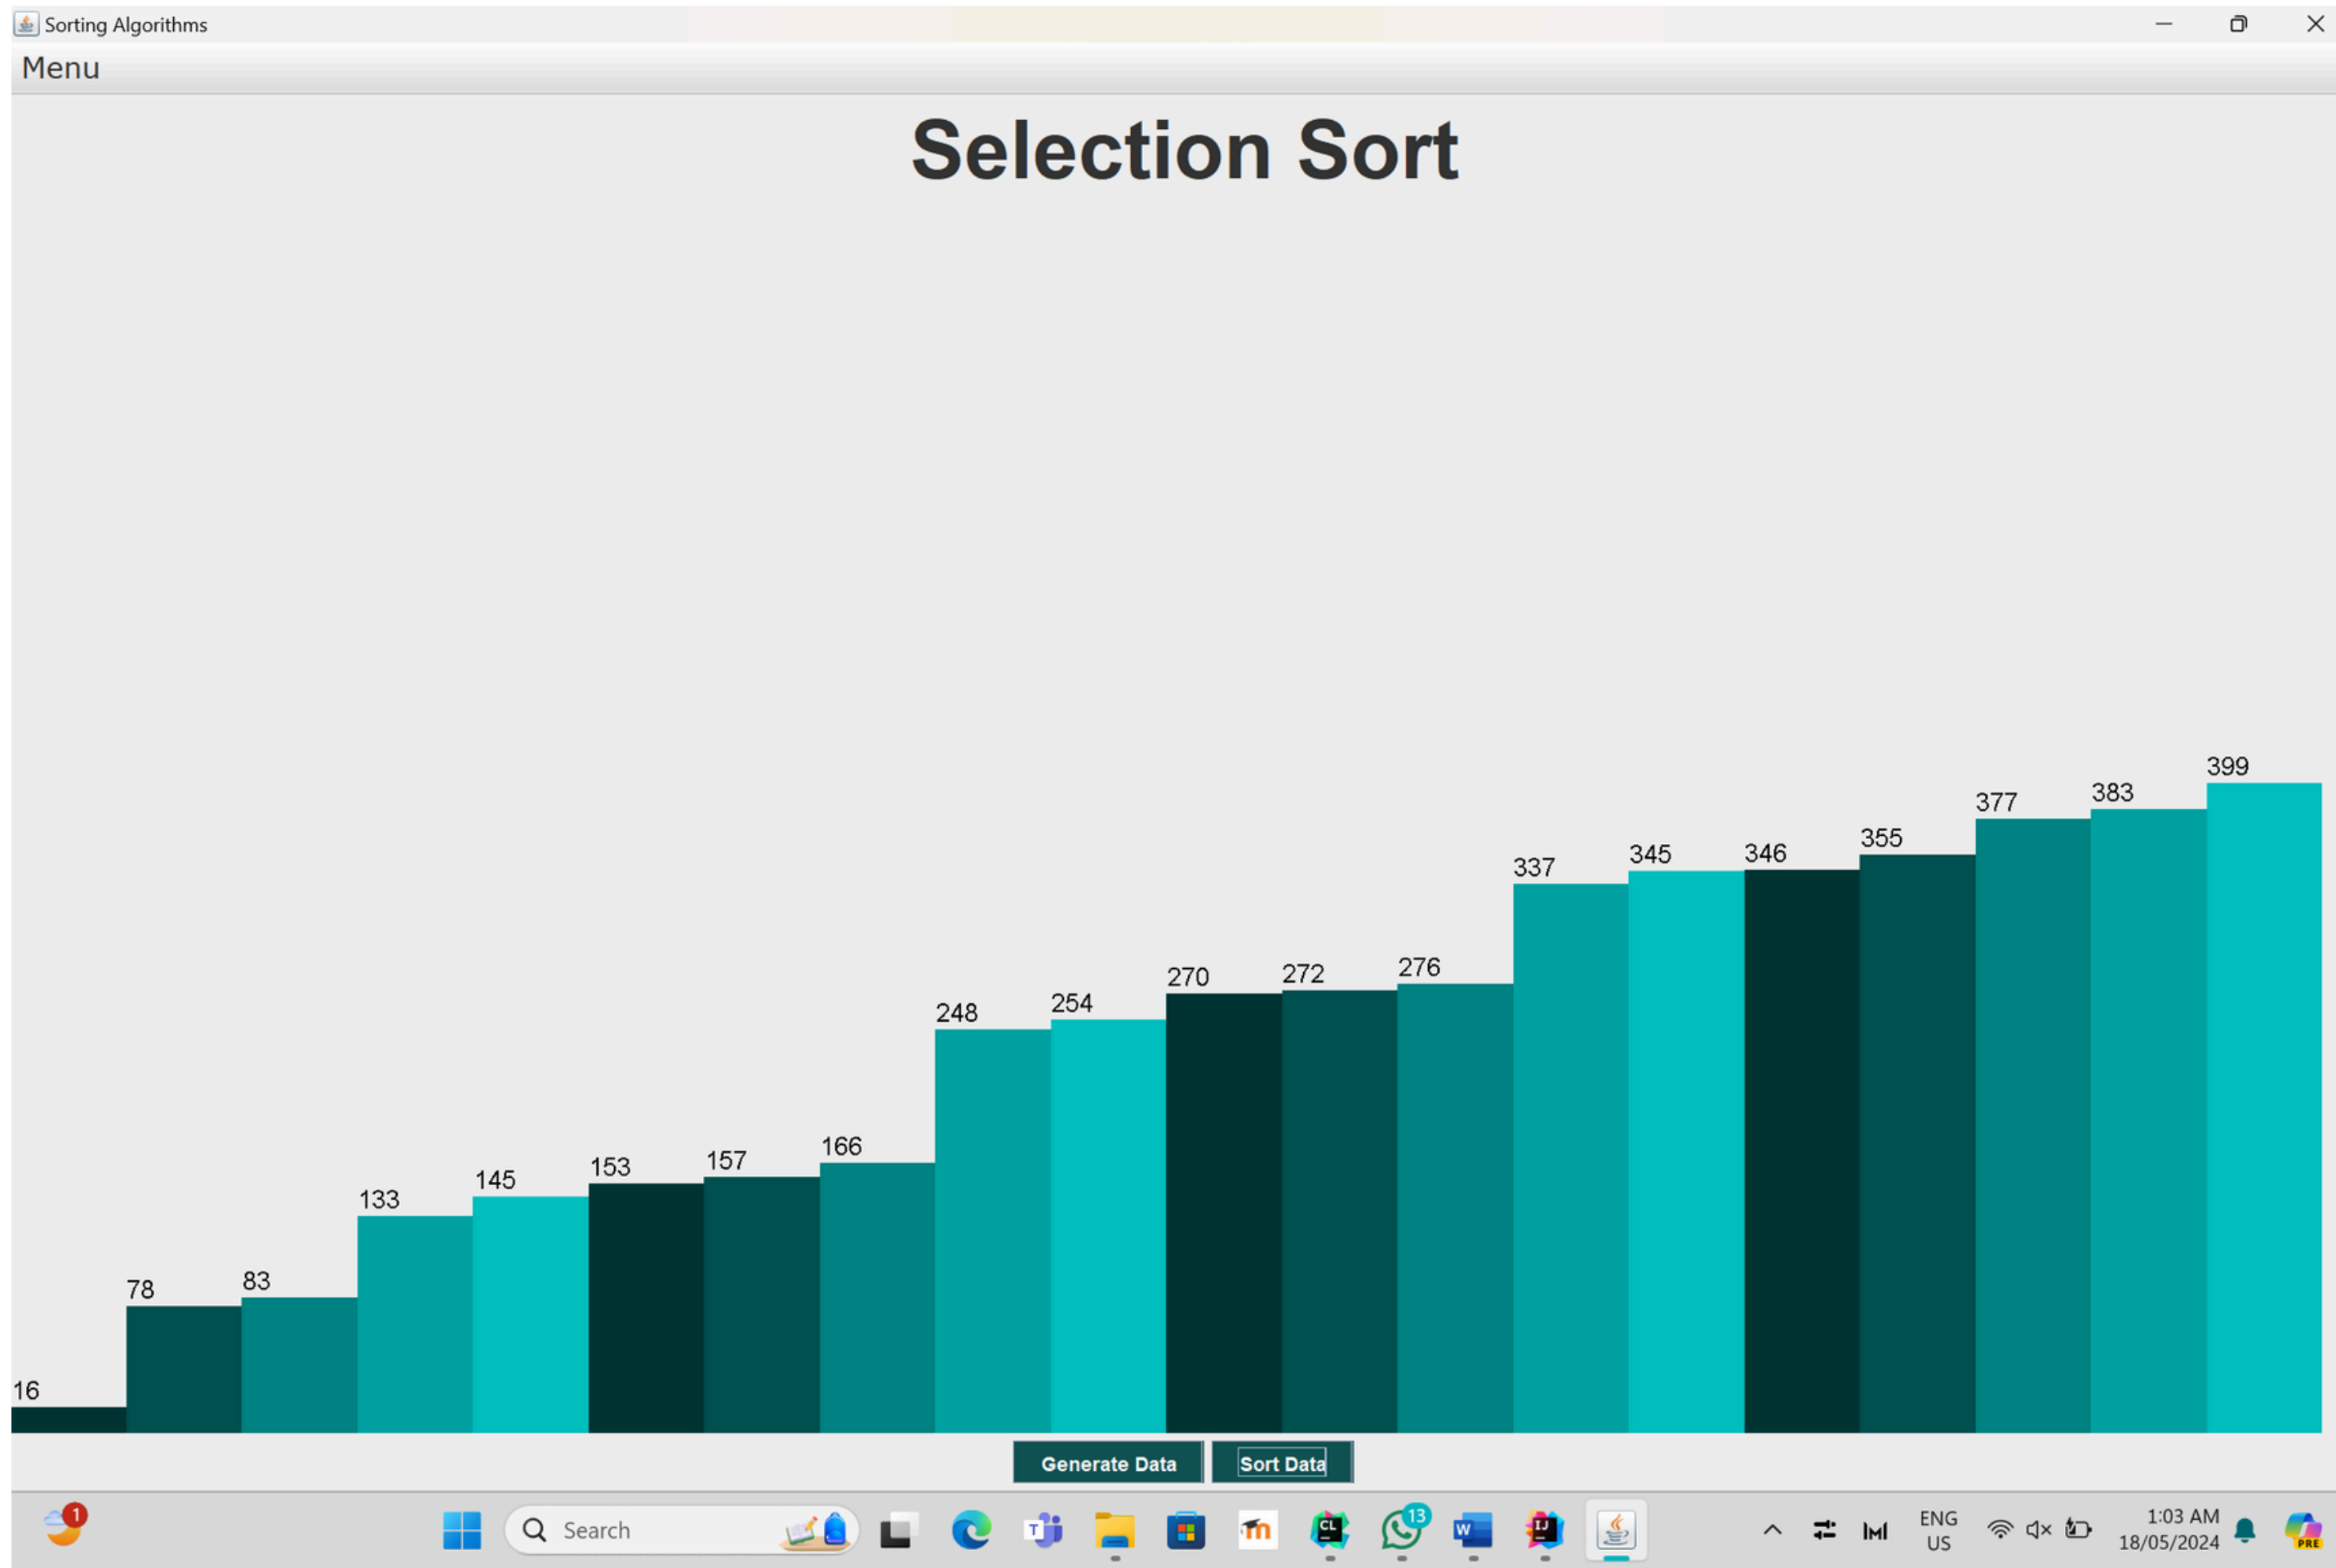

# SELECTION SORT:

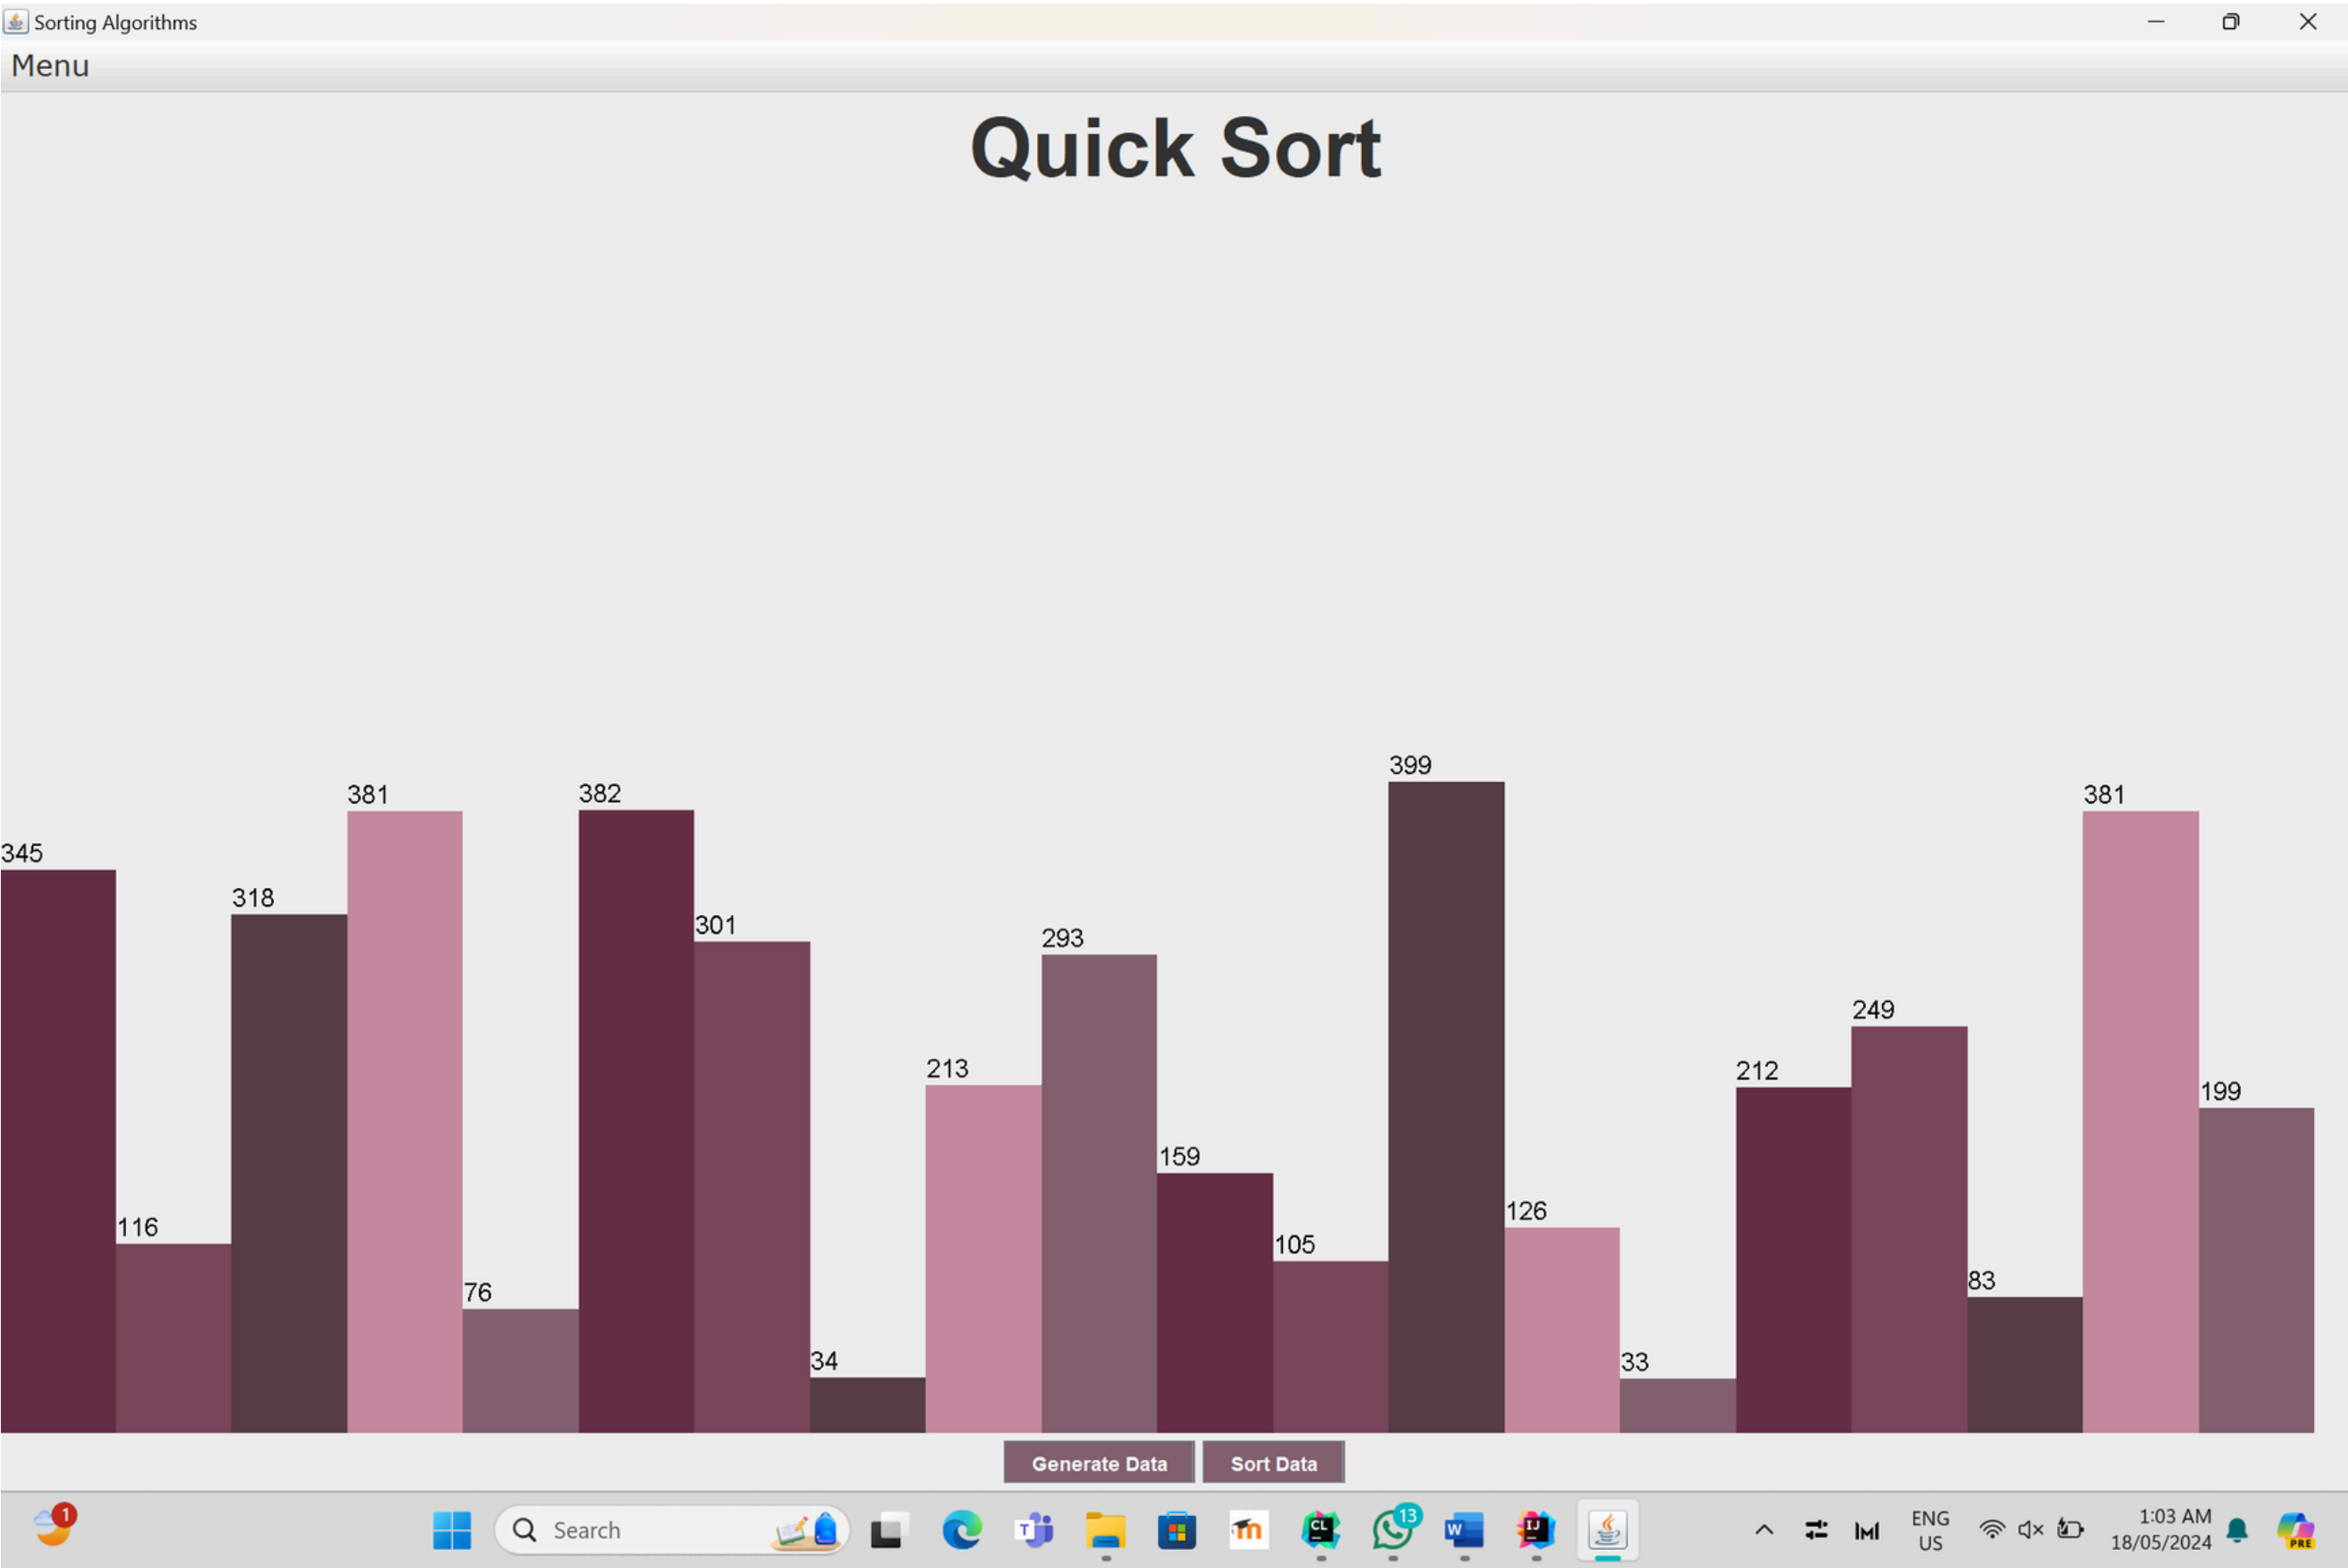

Random values can be changed by clicking on the generate data button, and when clicking on the sort data button, the elements are arranged in a visualization manner

# Items after sorting

**QUICK SORT:** Random values can be changed by clicking on the generate data button, and when clicking on the sort data button, the elements are arranged in a visualization manner

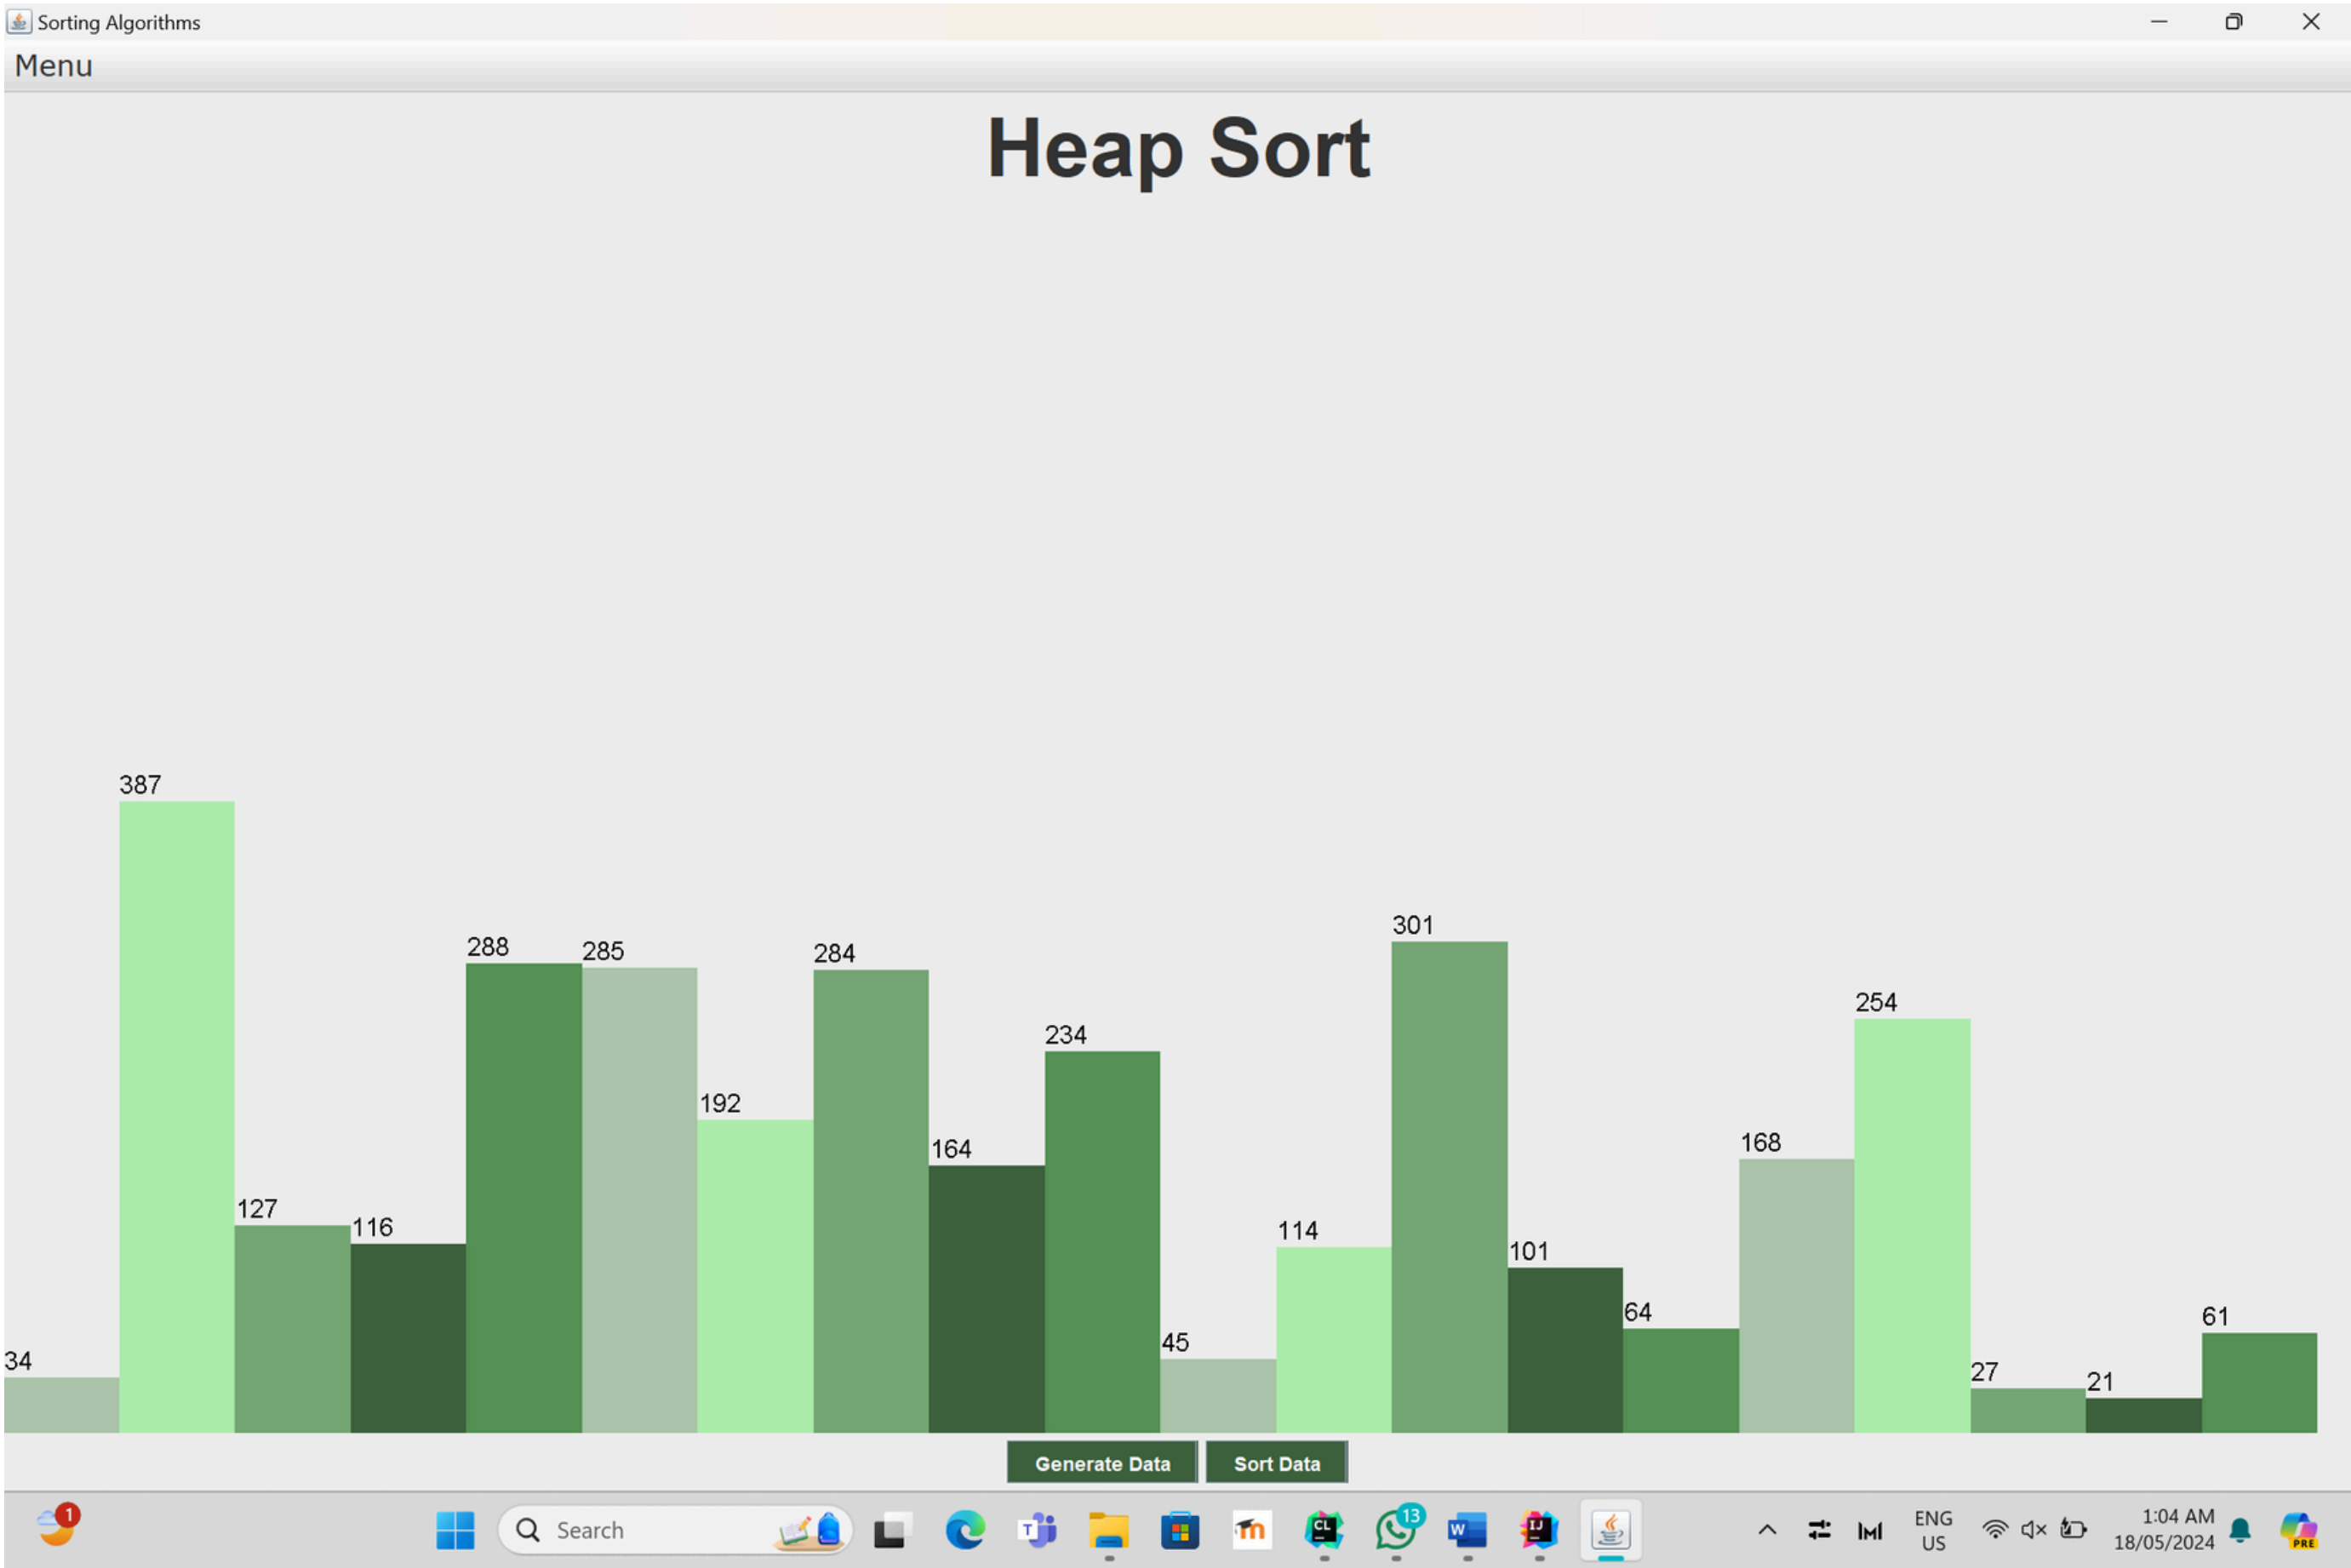

# Items after sorting

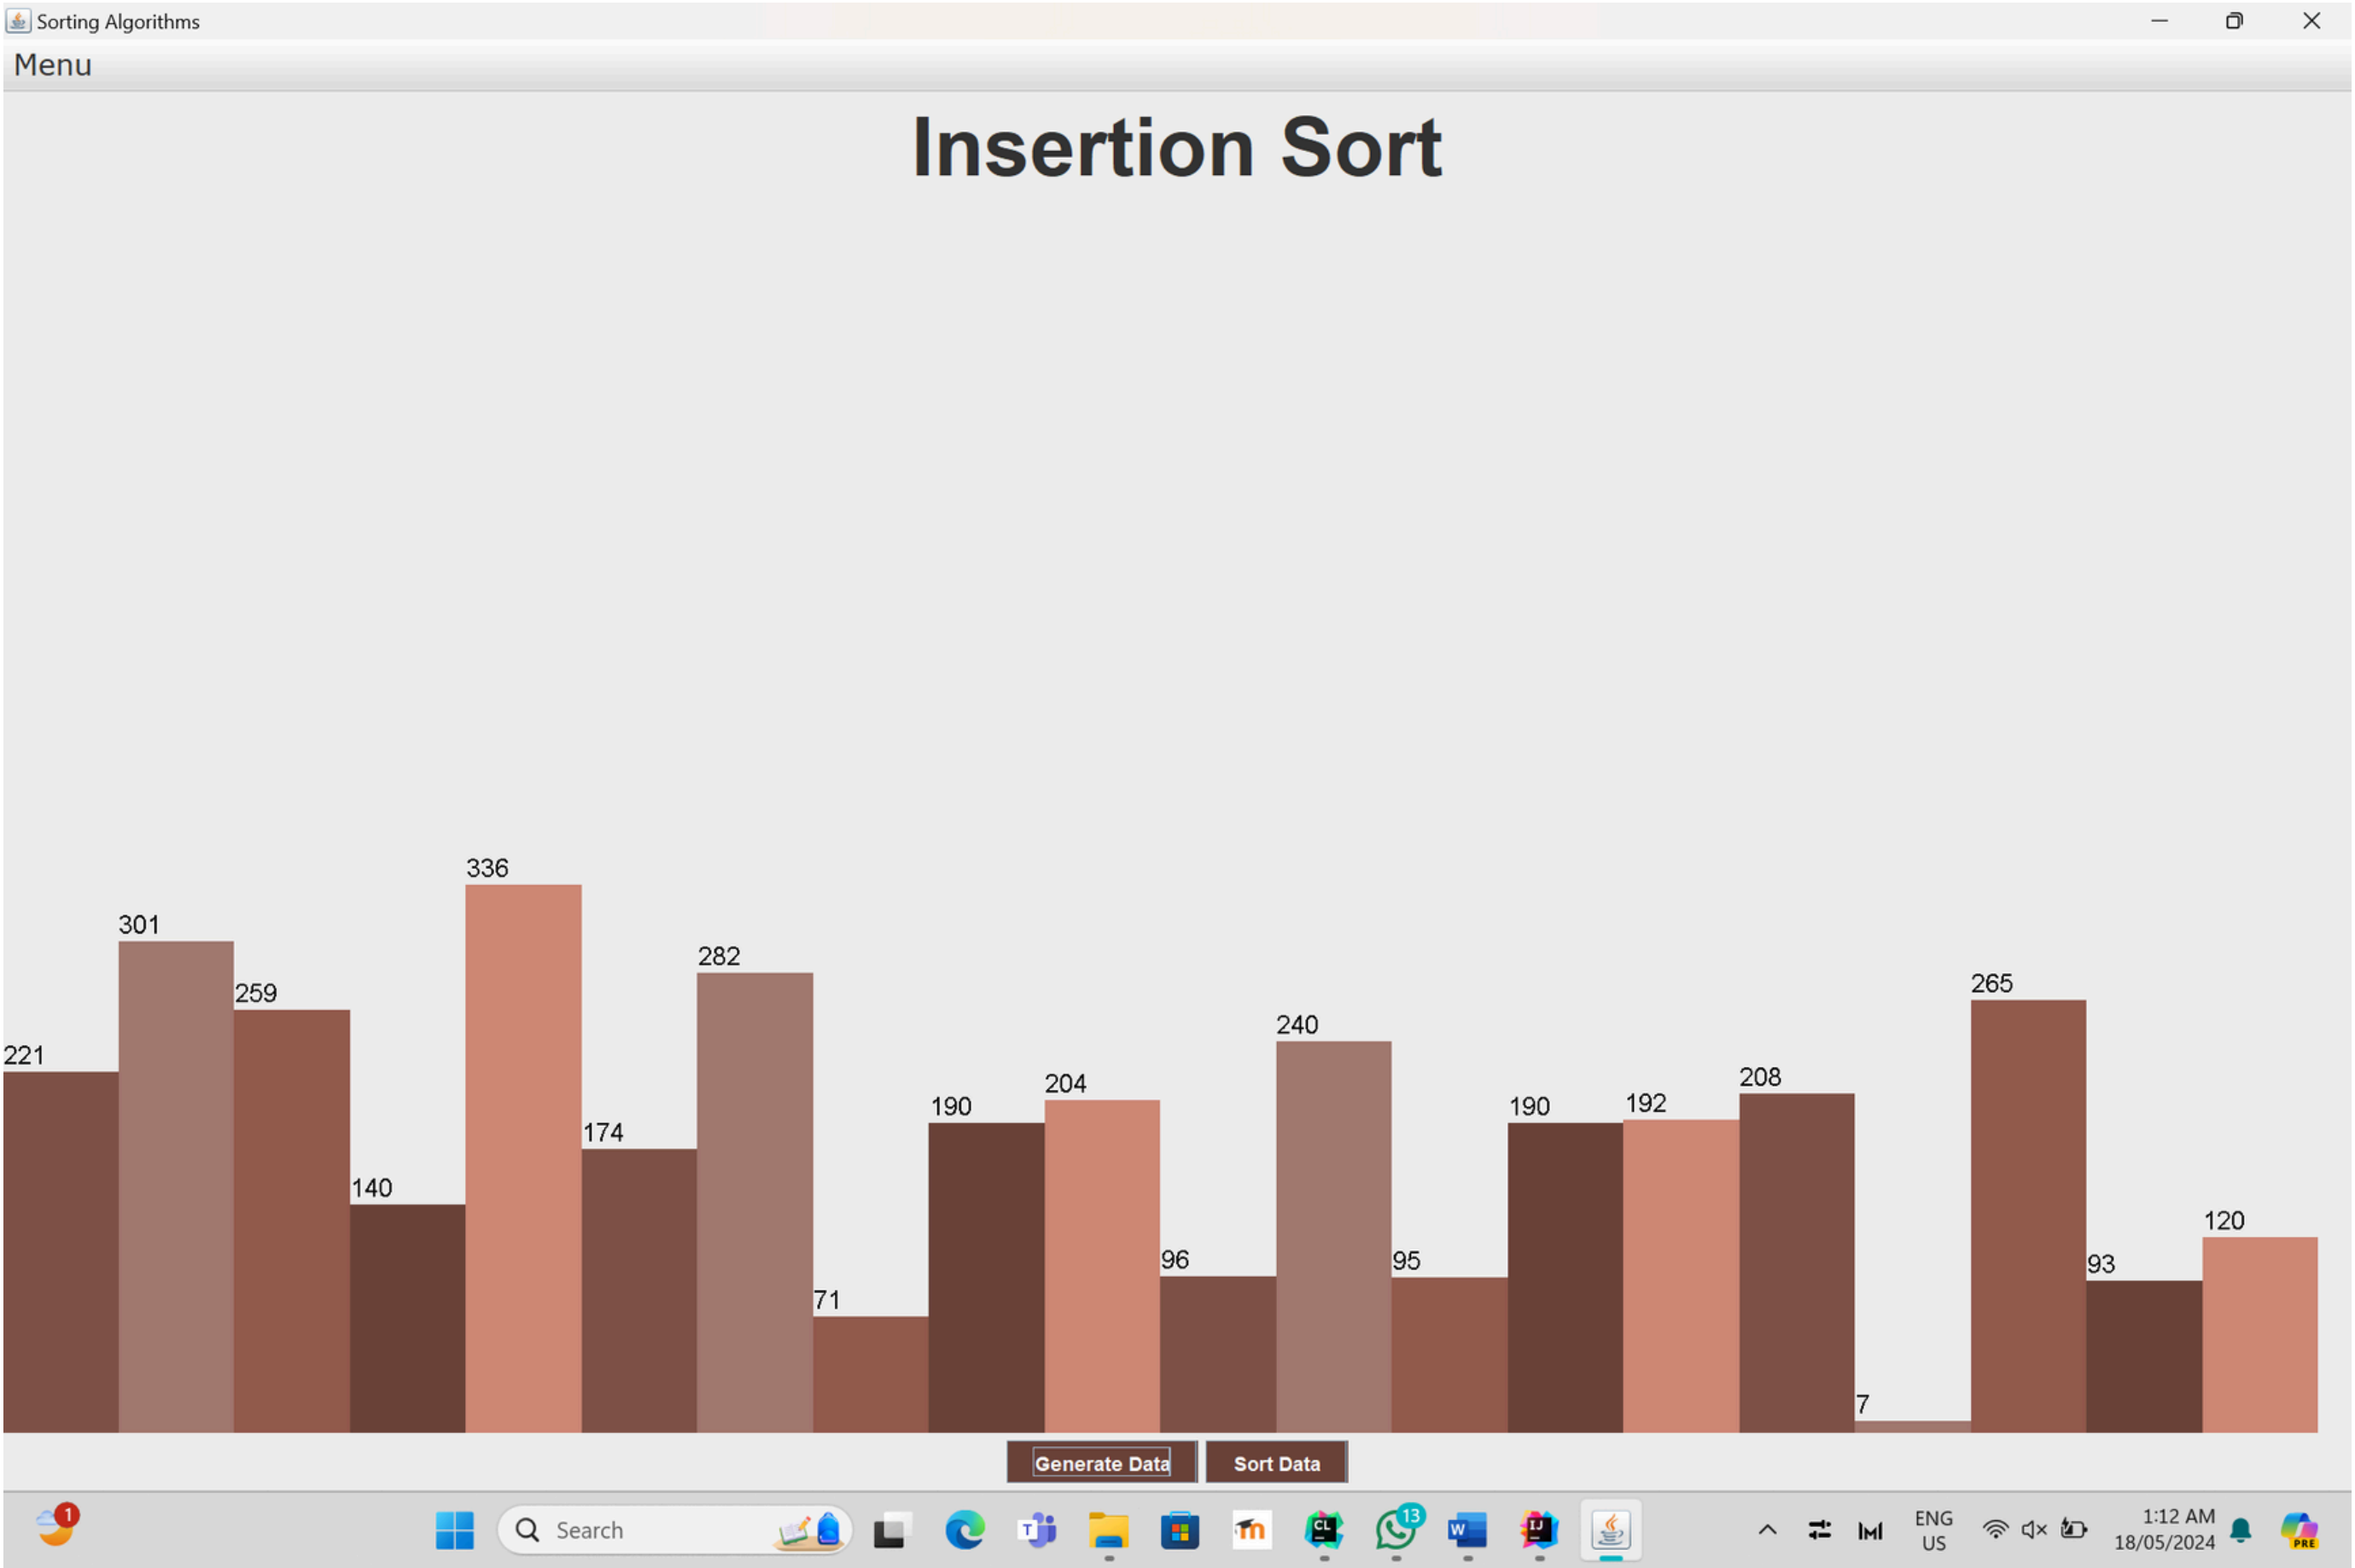

**HEAP SORT:** Random values can be changed by clicking on the generate data button, and when clicking on the sort data button, the elements are arranged in a visualization manner

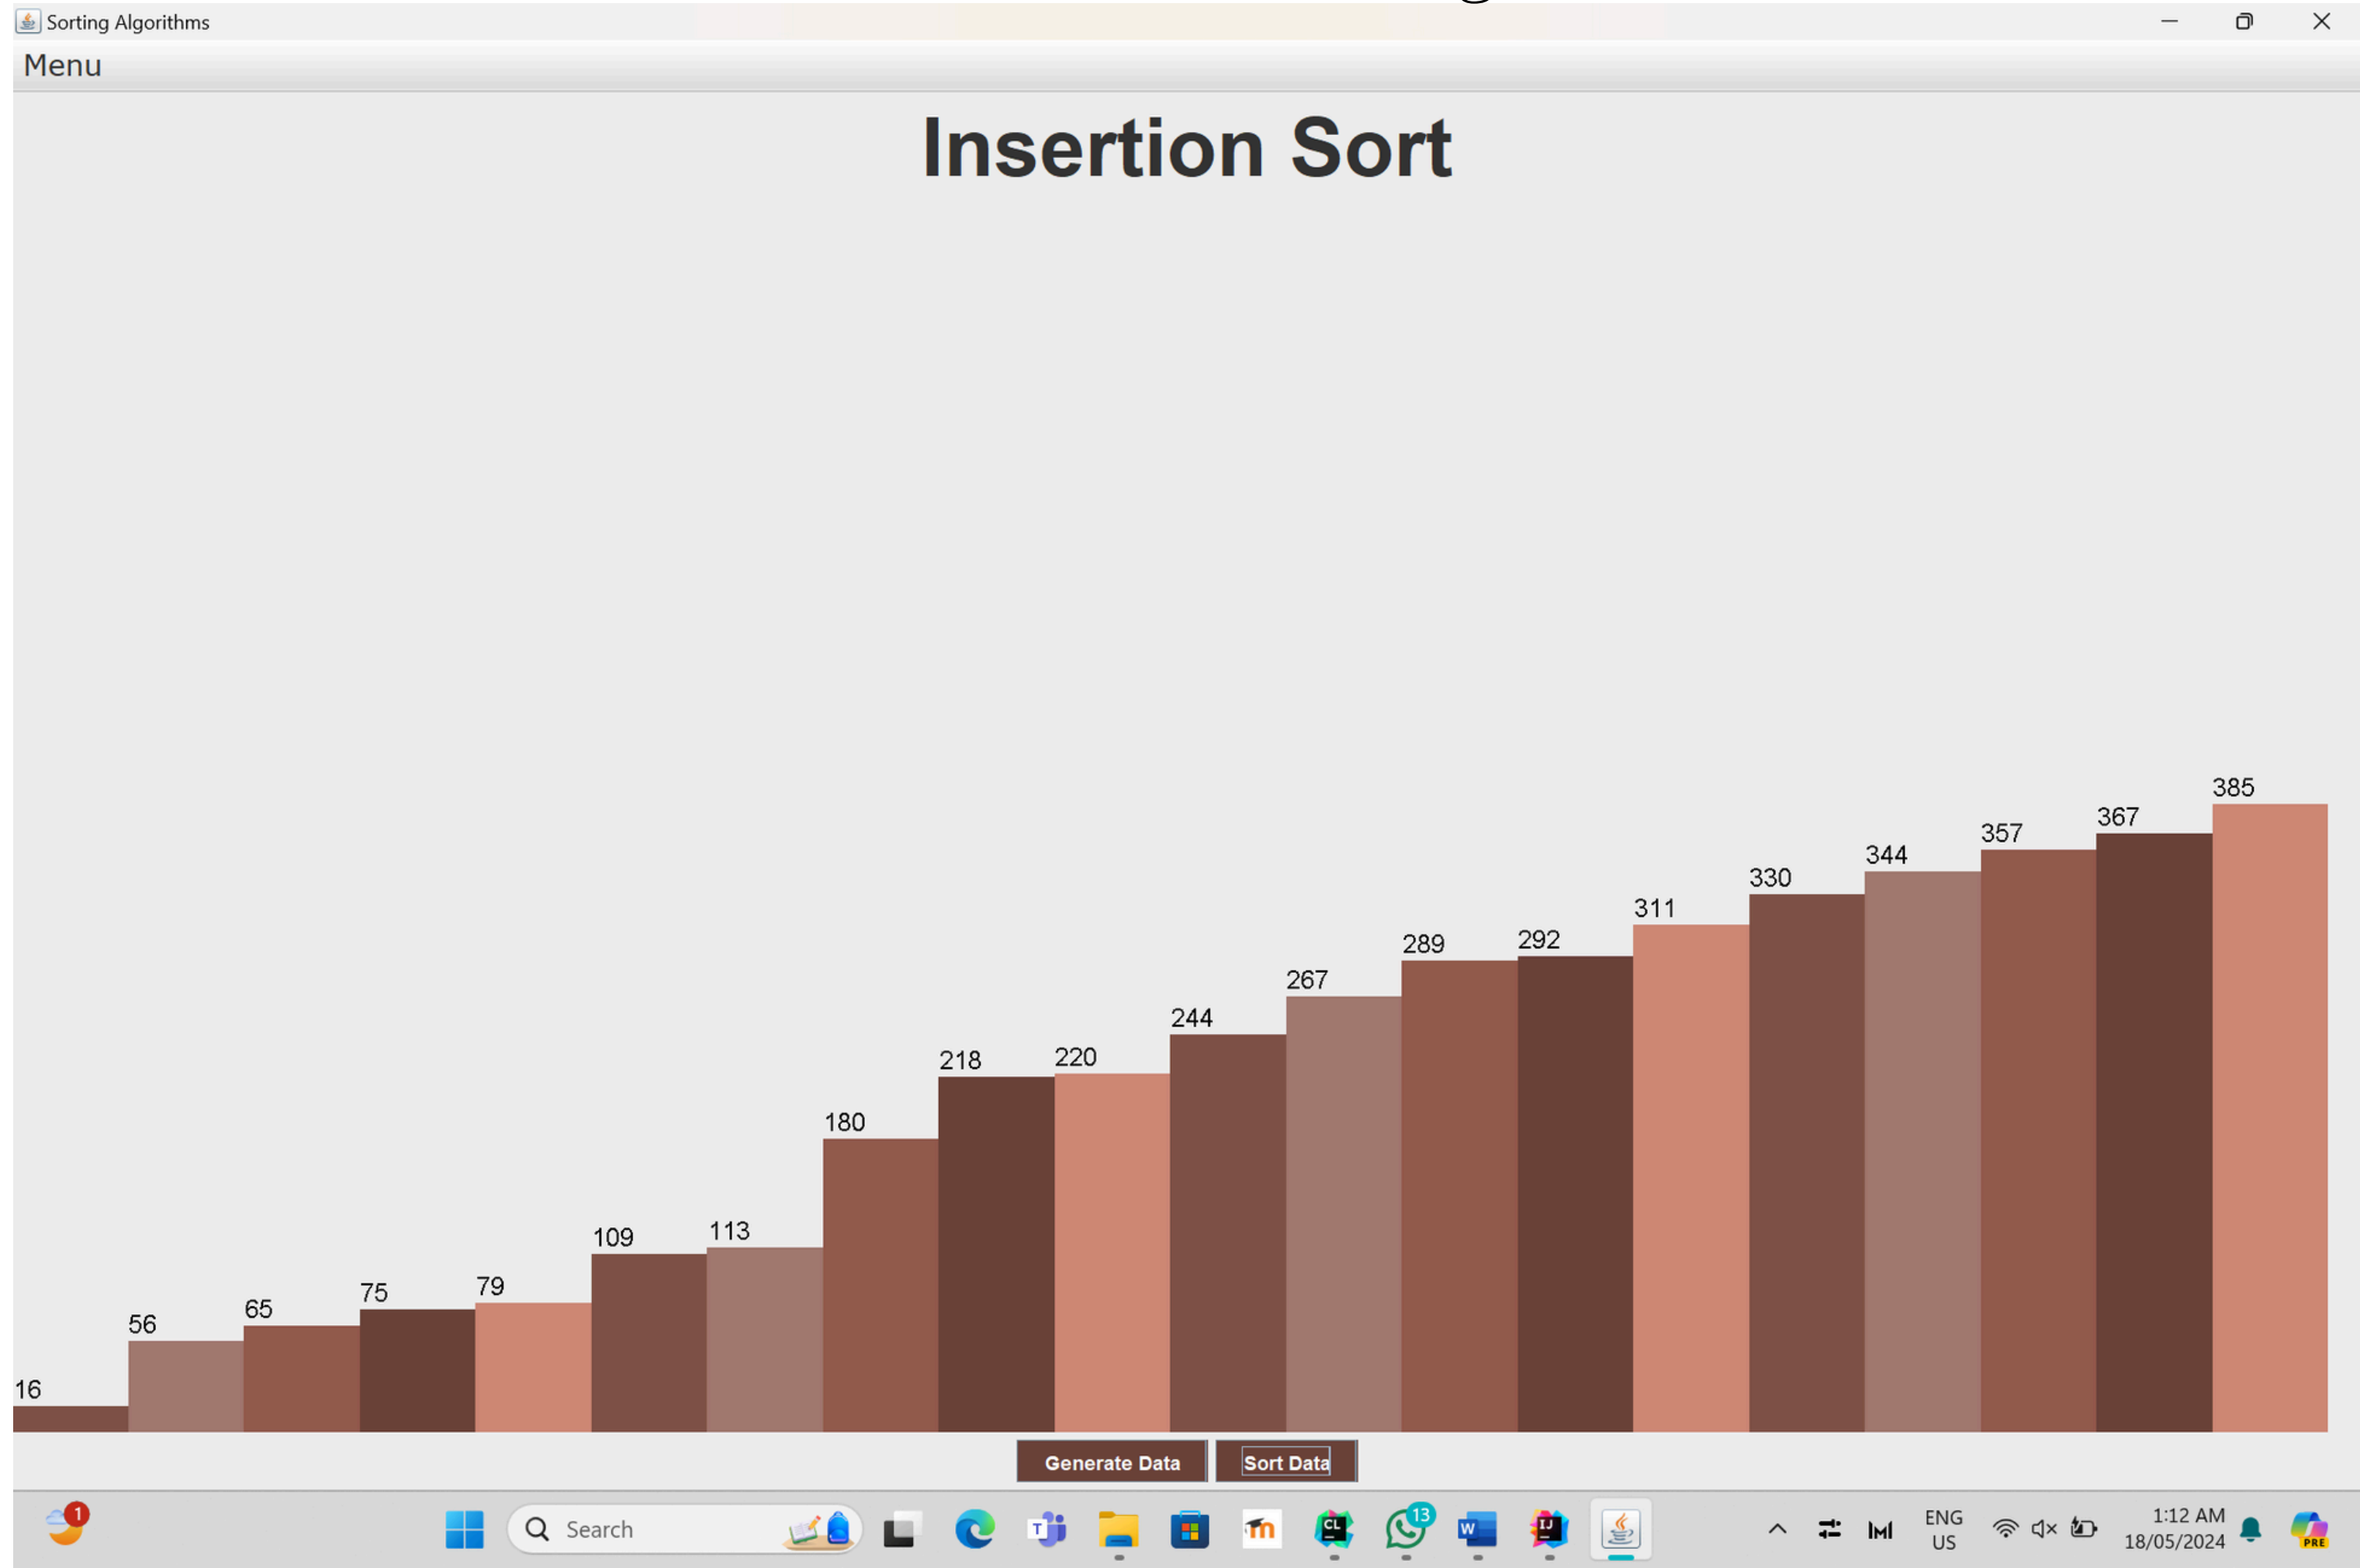

# Items after sorting

**INSERTION SORT:** Random values can be changed by clicking on the generate data button, and when clicking on the sort data button, the elements are arranged in a visualization manner

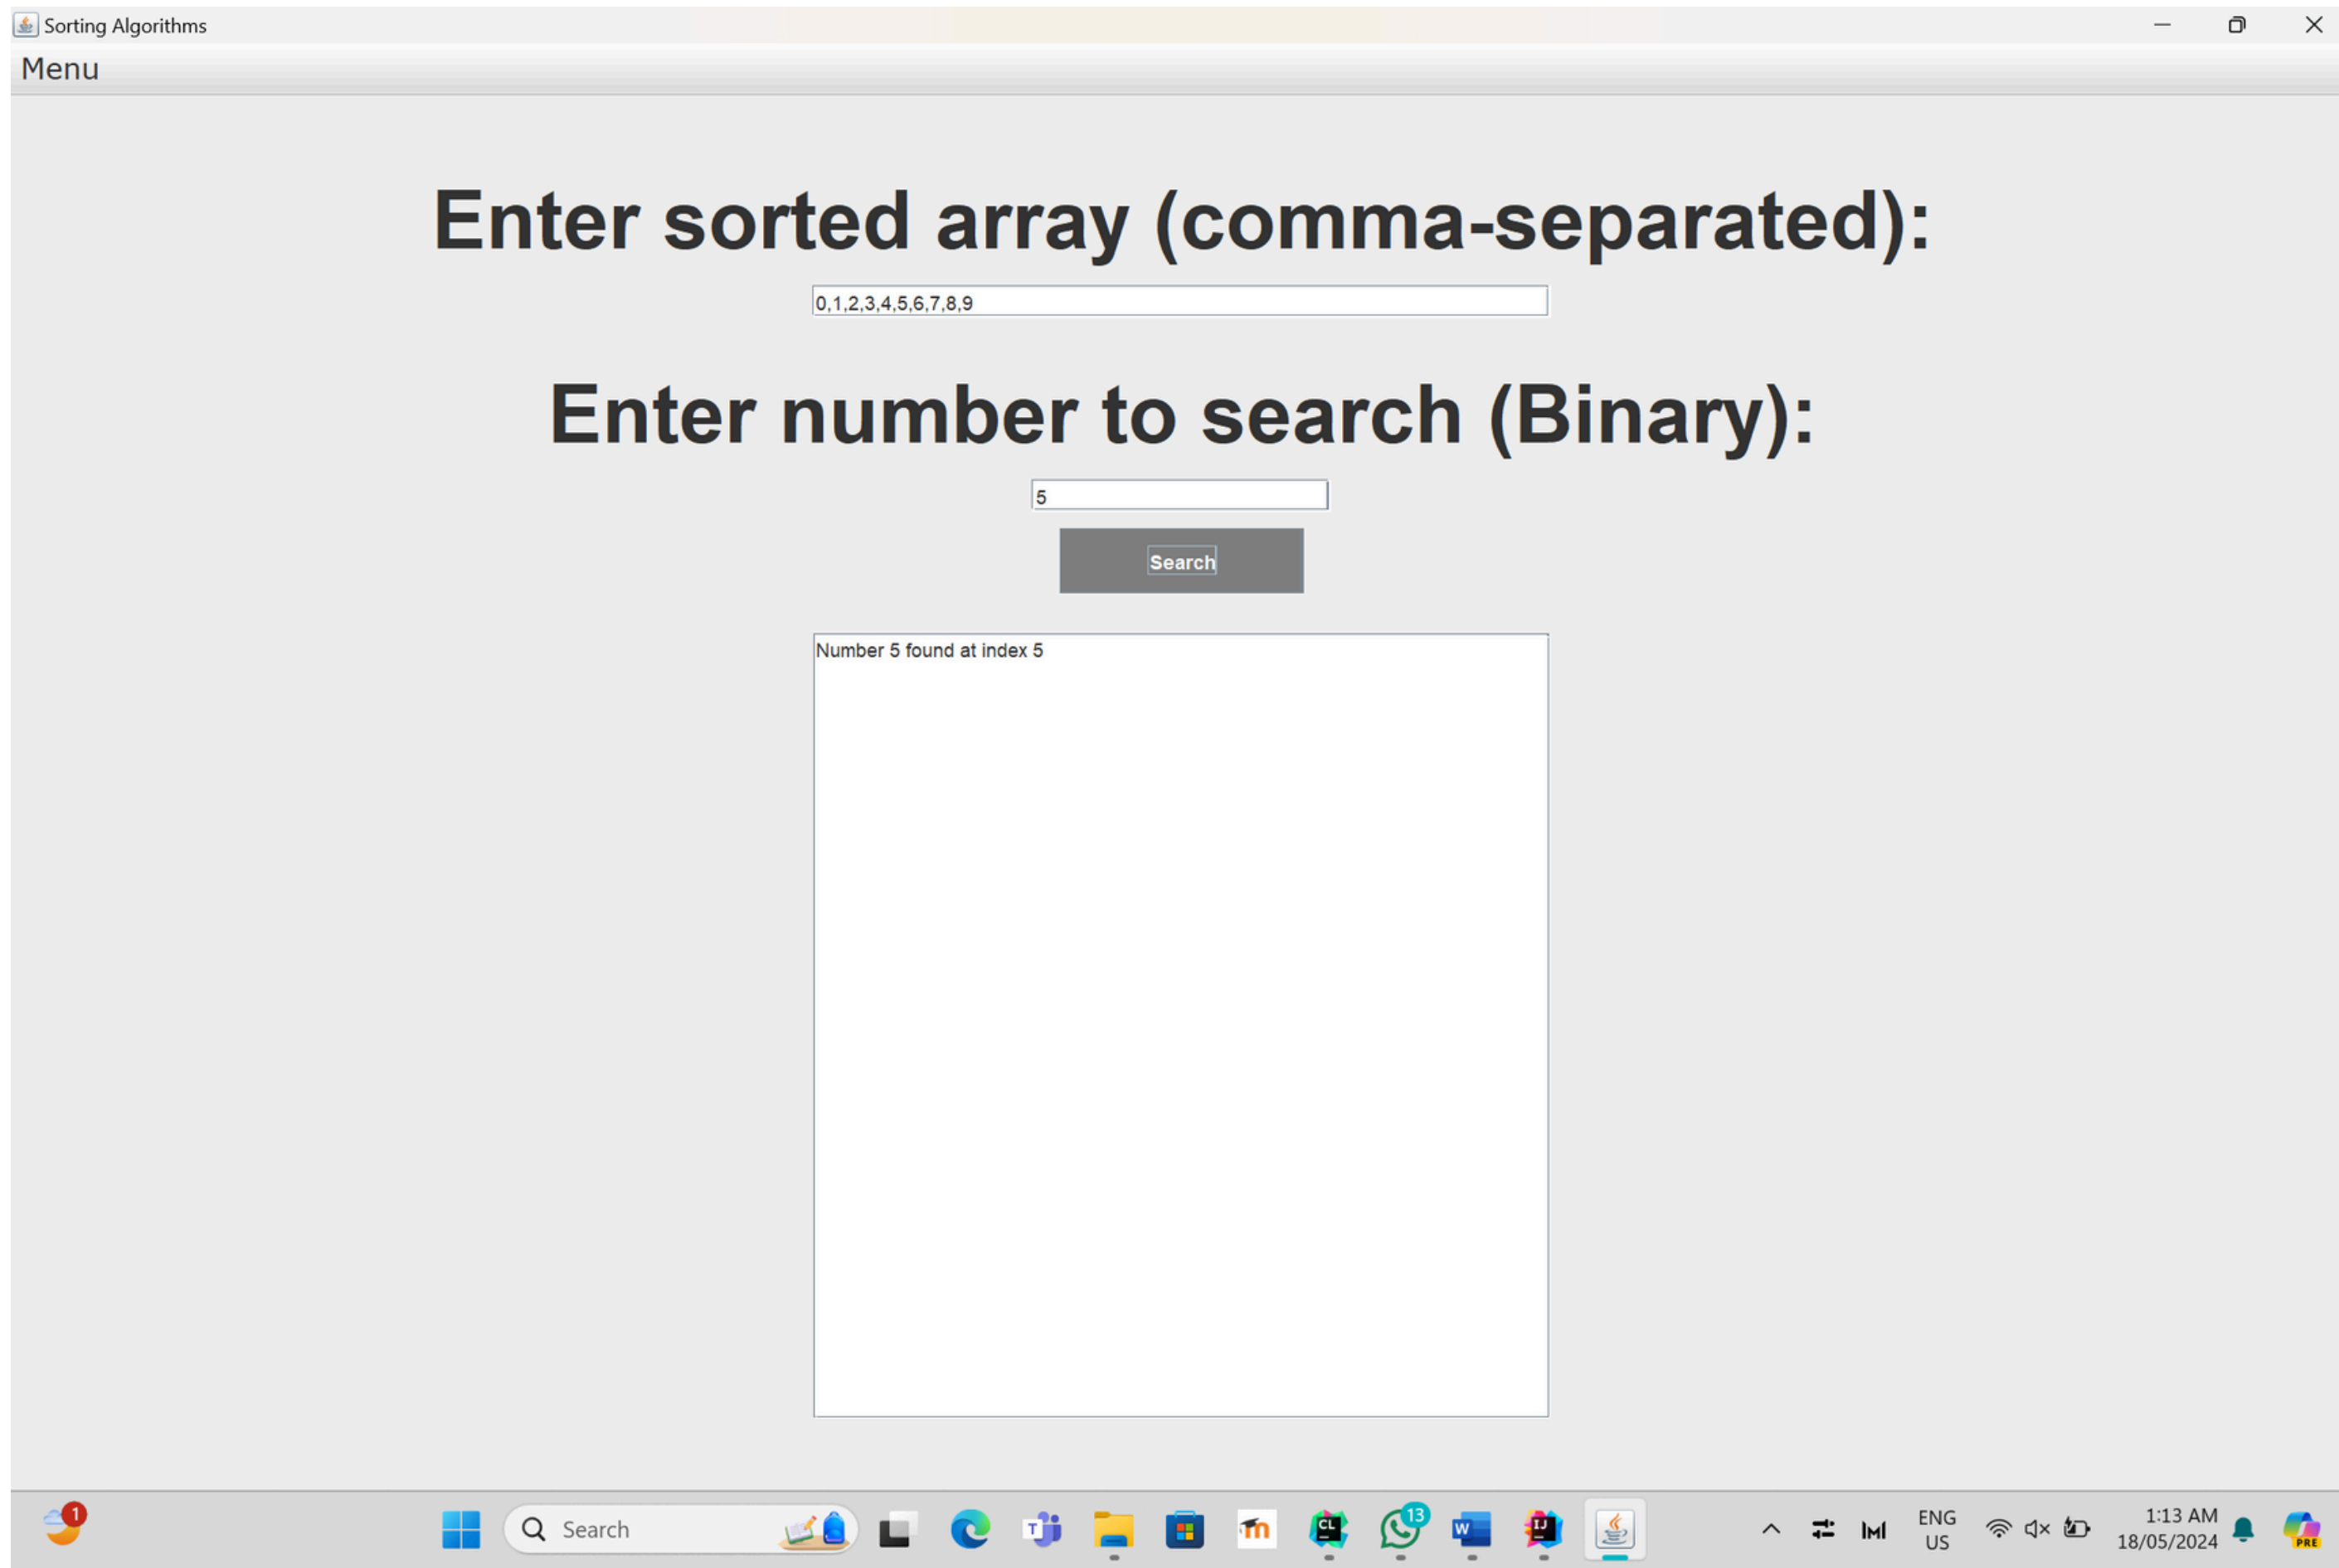

# Items after sorting

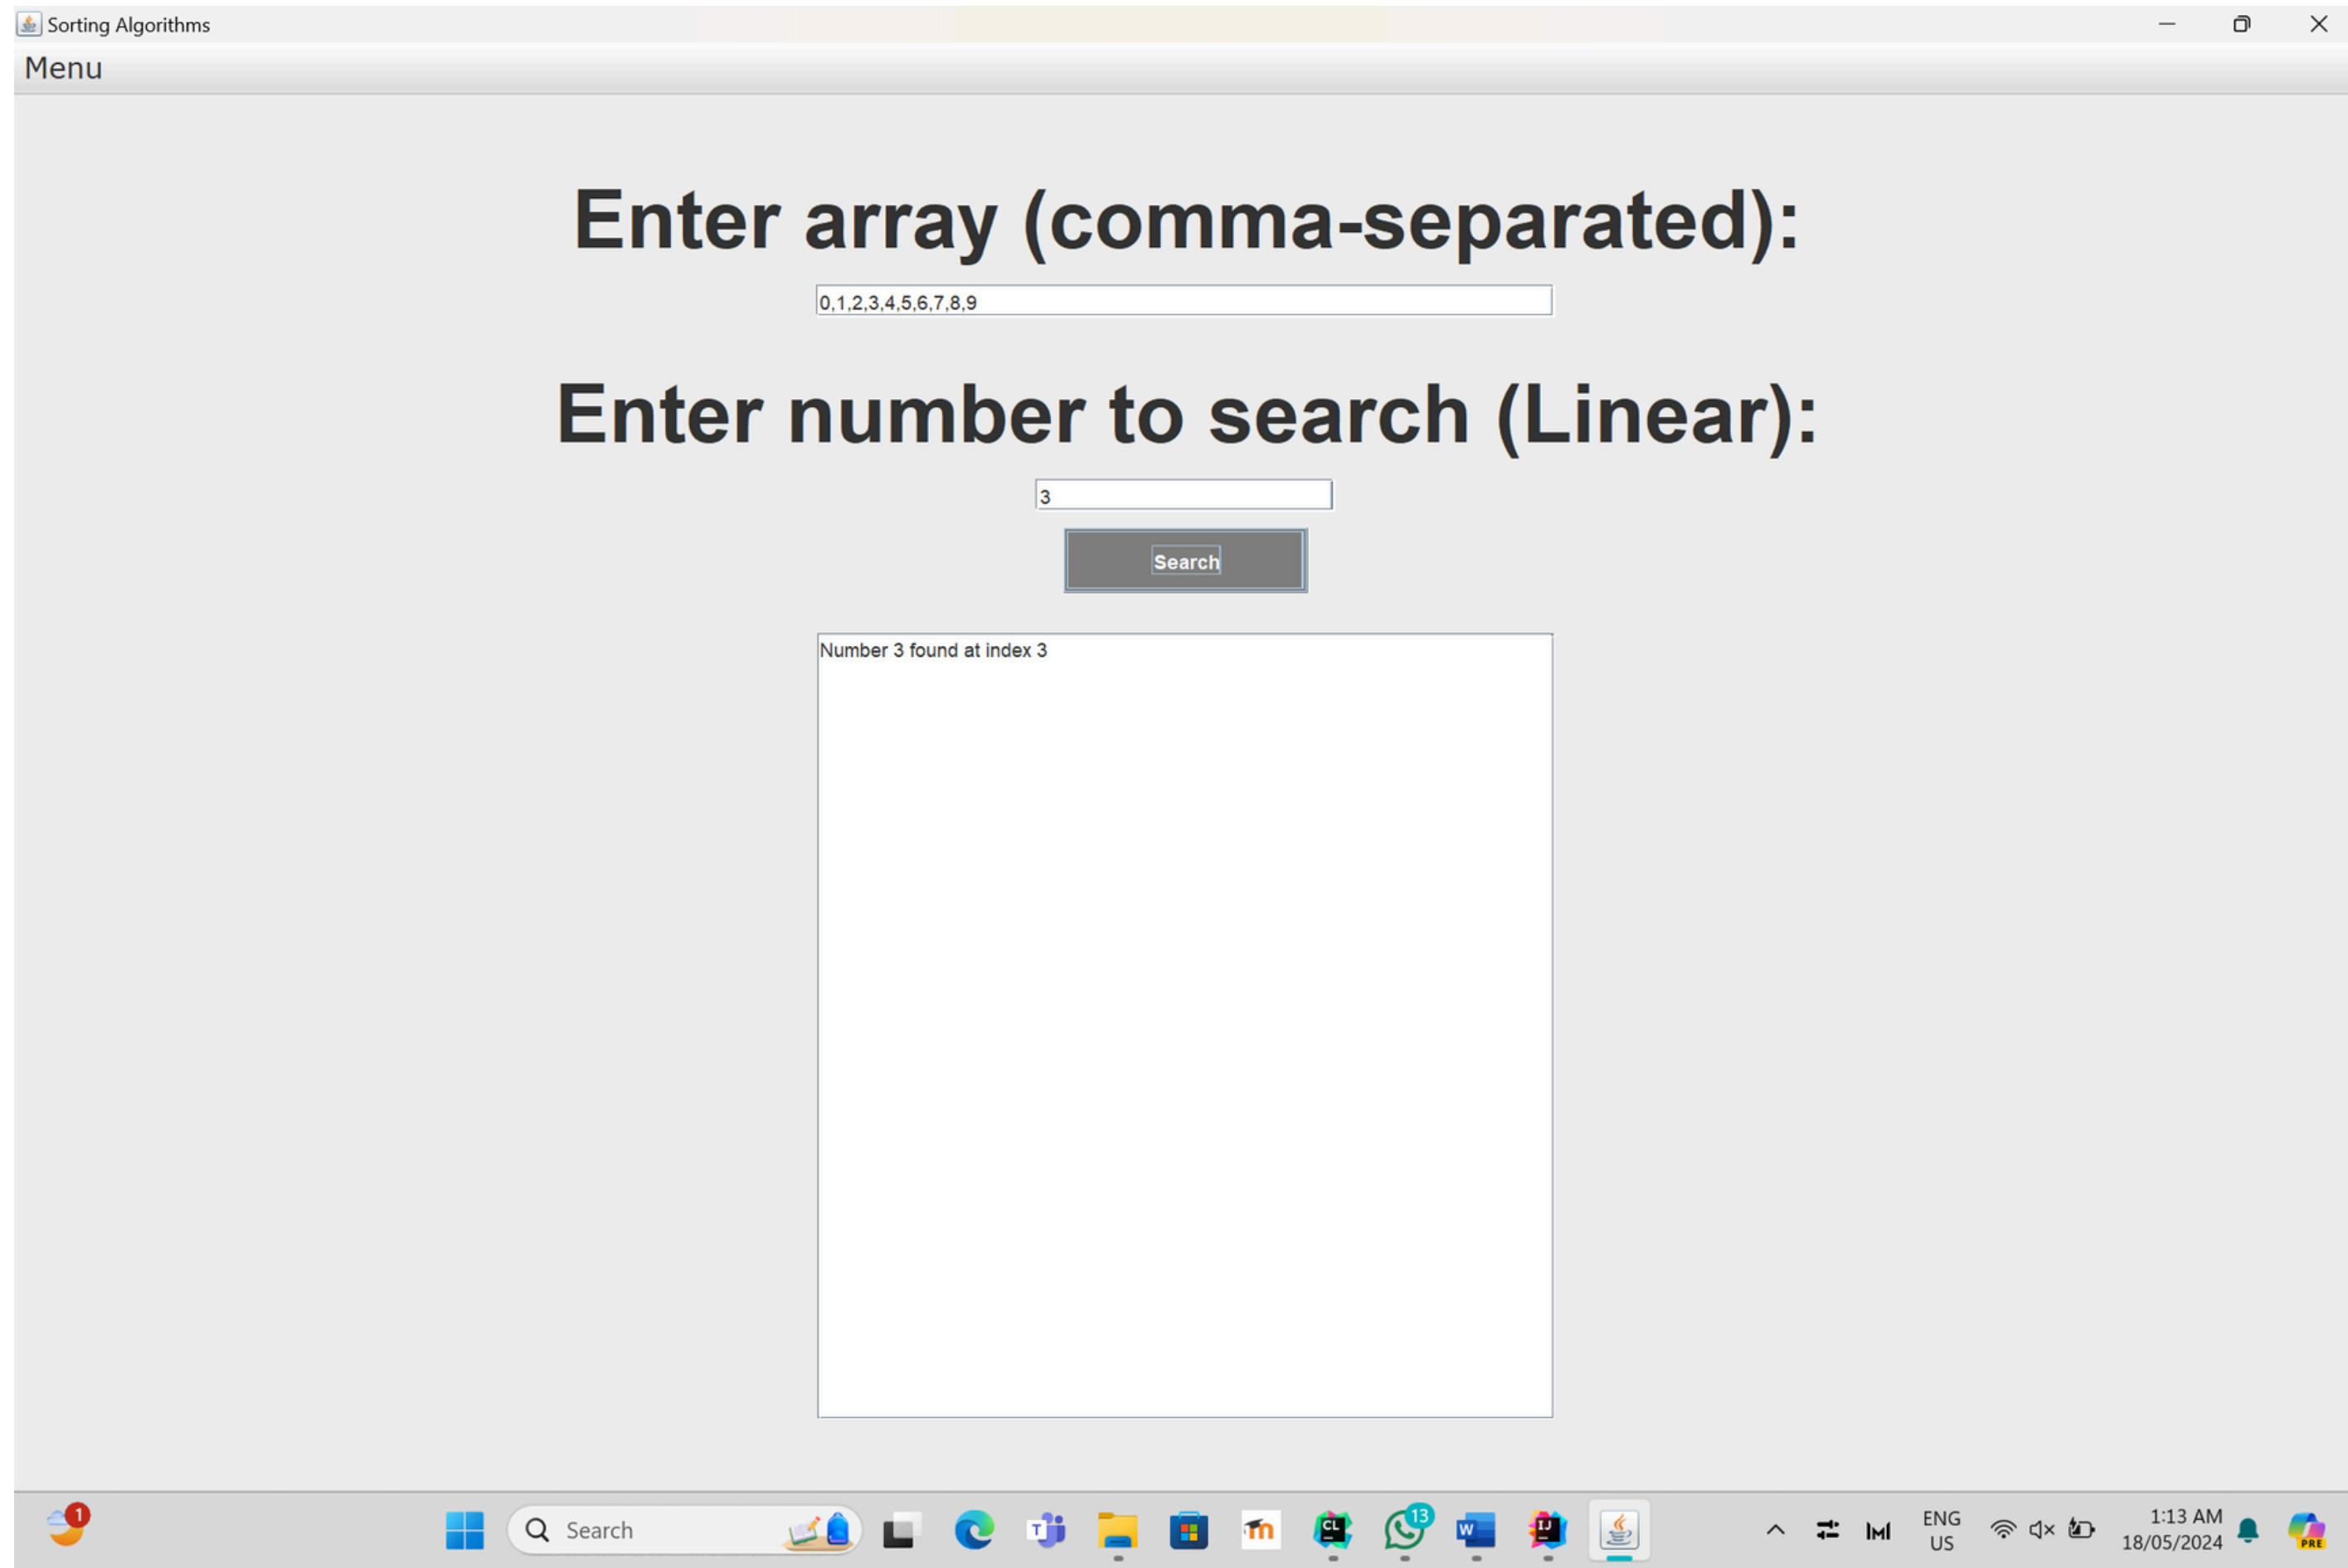

## BINARY SEARCH:

Search for an existing element in the array after entering it in order in the cell at the top using the binary search method.

## LINEAR SEARCH:

Search for an existing element in the array after entering it in order in the cell at the top using the linear search method.

**Thank You**
